Q85 Sensors

Compact Photoelectric Sensors with Universal Voltage and Wiring Chamber

Features

- Economical photoelectric sensors in NEMA-6P (IEC IP67) ABS housing
- Signal (AID™ System) and Output indicator LEDs
- Wiring chamber with two conduit entrances
- Available in three electrical configurations:

  Q85VR3 Models: 24 to 240V ac or 12 to 240V dc supply voltage, 3 amp electromechanical output relay

  Q85BW13 Models: 24 to 240V ac or 12 to 240V dc supply voltage, SPST 0.3 amp isolated solid-state output switch, light/dark operate switch

  Q85BB62 Models: 10 to 48V dc supply voltage, bipolar solid-state outputs (one NPN sinking and one PNP sourcing), low-saturation hookup option for TTL compatibility, light/dark operate switch

- "T9" model suffix indicates selectable output timing (8 options, configured via DIP switch; see page 3)

⚠ WARNING . . . Not To Be Used for Personnel Protection

Never use these products as sensing devices for personnel protection. Doing so could lead to serious injury or death.

These sensors do NOT include the self-checking redundant circuitry necessary to allow their use in personnel safety applications. A sensor failure or malfunction can cause either an energized or de-energized sensor output condition. Consult your current Banner Safety Products catalog for safety products which meet OSHA, ANSI and IEC standards for personnel protection.

Overview

Most adjustments are made to the sensor via switches accessible under the sensor's gasketed cover. For Q85VR3.. models, the light/dark operate selection is made via the hookup. For other models, the selection is made via a switch (see Figure 1).

Light operate (L.O.): the sensor's outputs are energized when the sensor sees its own modulated light source (after any ON-delay). Dark operate (D.O.): the outputs are energized when the sensor does not see its modulated light source (after any ON-delay).

Sensor sensitivity is set at the single-turn Sensitivity Adjustment potentiometer.

Timing Logic Selection (T9 Models)

The output timing logic function (on sensor models with "T9" model number suffix) is selected at the Timing Logic selection switches, according to the table below. The output timing logic delays are set at the single-turn Time Adjustment potentiometer. When the timing function involves more than one time (as in ON- and OFF-delay, ON-delayed one-shot, and ON-delayed limit timer functions), the potentiometer sets both times to the same value, between 0.1 and 5 seconds.

Logic Function	Switch		
	SW1	SW2	SW3
Both ON- and OFF-delays	0	0	0
ON-delay only	0	0	1
OFF-delay only	0	1	0
No delay	0	1	1
ON-delayed one-shot	1	0	0
ON-delayed limit timer	1	0	1
One-shot	1	1	0
Limit timer	1	1	1

Q85VR3 Model Specifications

Supply Voltage and Current	24 to 240V ac, 50/60 Hz or 12 to 240V dc (2 watts maximum)
Supply Protection Circuitry	Protected against transient voltages. DC hookup is without regard to polarity.
Output Configuration	Q85VR3.. models - SPDT e/m relay, ON/OFF output Q85VR3..-T9 models - SPDT e/m relay, selectable timer
Output Rating	Maximum switching power (resistive load): 90W, 750 VA Maximum switching voltage (resistive load): 250V ac or 30V dc Maximum switching current (resistive load): 3A Minimum voltage and current: 5V dc, 10 mA Mechanical life: 50,000,000 operations Electrical life at full resistive load: 100,000 operations
Output Protection Circuitry	Protected against false pulse on power up.
Output Response Time	Closure time (no time logic in use): 20 milliseconds max. Release time (no time logic in use): 20 milliseconds max. Maximum switching speed: 25 operations per second
Repeatability	All sensing modes (no time logic in use): 1 millisecond
Adjustments	Single-turn Sensitivity control potentiometer, accessible beneath the ABS wiring chamber cover. Timing logic (for "T9" models) is configured via DIP switch. Pulse length and delay are set by a single-turn potentiometer (under the wiring chamber cover). The adjustable time range for both functions is 0.1 to 5 seconds; both functions are automatically set to the same value.
Indicators	Exclusive Alignment Indicating Device system (AID™) lights a red LED indicator whenever the sensor sees its own modulated light, and pulses at a rate proportional to the strength of the light signal. Yellow indicator lights whenever the sensor's output is energized.
Construction	Yellow ABS housing, acrylic lenses, and steel-plated hardware. Maximum wire size (for connection to wiring terminals) is #14 AWG.
Environmental Rating	Meets NEMA standards 1, 2, 3, 3S, 4, 4X, 6, 6P, 12, and 13; IEC IP67
Operating Conditions	Temperature: –25° to +55°C (–13° to +131°F) Max. Relative Humidity: 90% at 50°C (non-condensing)
Vibration and Mechanical Shock	Meets Mil. Std. 202F requirements. Method 201A (Vibration: frequency 10 to 55 Hz max., douple-amplitude 0.06", max. acceleration 10G) Method 213B conditions H & I (Shock: 75G with unit operating; 100G for non-operation)
Application Notes	Install transient suppressor (MOV) across contacts switching inductive loads.
Certifications	CE CSA® NRTL/C
